AirRenew[®] Essential

Indoor Air Quality Drywall

The only drywall that actively improves indoor air quality

AirRenew[®] Essential Drywall actively removes formaldehyde from the air, protecting homeowners from harmful VOCs. It's the only drywall that improves air quality by capturing and converting formaldehyde into a safe, inert compound.

The air inside homes is often more polluted than outside. That's because today's homes are built virtually airtight. This makes them more energy efficient, but also traps harmful VOCs inside. And since people spend approximately 90% of their time indoors,

it's important that indoor air be as clean and healthy as possible.

AirRenew Essential is a cost-effective solution for applications where mold and moisture resistance is not required. It is available in 1/2" regular or 5/8" Type X resistant gypsum.

For added protection against moisture and mildew, choose CertainTeed's AirRenew M2Tech[®] IAQ drywall.

Product	Size	CertainTeed Code	UPC Code
1/2" AirRenew Essential	4' x 8'	315518	800805155185
